Summary:

I am a tech-savvy, results-oriented, proven technical project manager, change agent, and customer advocate. Always working to improve communication, transparency and ultimately customer satisfaction, I offer a problem-solving first approach, while providing positive leadership and customer empowerment. I excel in an environment with diverse stakeholders, cutting-edge technology, and dynamic requirements.

Experience:

American Institutes for Research Senior Technical Project Manager

Washington, DC 20007
August 2013-Present

- Requirement collection, analysis, design and development.
- Manage estimation and budget development processes.
- Perform project planning, tracking and status reporting.
- Interact with customers to gather requirements, troubleshoot issues and manage expectations.
- Introduced Scrum Agile product development practices.
- Integrated new project management software and trained technical project managers of other teams in its use.
- Matrix-manage multiple development teams consisting of contractors, permanently assigned developers and members of cross-functional teams.

State of Utah, Technology Services Supervisor, Software Development

Salt Lake City, UT 84111
April 2013 – August 2013

- Supervisor of the BLS Quarterly Census of Employment and Wage iQ and Expo Projects.
- Team Management including recruitment, mentoring, training, performance management and talent retention.
- Worked closely with BLS stakeholders and iQ team to define system requirements, establish project plans, negotiate contract deliverables, assist with implementation, determine infrastructure requirements, and meet project milestones.
